

VISCOMETER

MANUFACTURER : Brookfield

MODEL : 2 models available

Applications

- Measure the viscosity of formulations such as hand soaps and adhesives.
- Allows observation of the real-time increase in viscosity during a reaction.
- Different modules allow to measure the viscosity at high temperature.

Analysis

- 2 models available : one allowing the measurement of low viscosity liquids (< 800 cP) and the other allowing the measurement of very viscous liquids (> 800 cP)
